

# CRM\_InnoNet

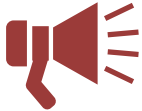

Substitution of Critical Raw Materials

## Mapping

current substitution technologies and initiatives

**Policy**  
recommendations

## Prioritisation

of applications under threat

## Networking

of the substitution stakeholder community

## Roadmap

for critical raw materials substitution

### Critical Raw Materials Innovation Network (CRM\_InnoNet)

**Critical raw materials** are vital to key European industries such as aerospace, manufacturing and clean energy but are often entirely imported.

**Substituting** or **replacing** a critical raw material for a less scarce resource, or a new technology or service, is one approach to reducing Europe's dependence on imports as well as creating opportunities for innovation.

CRM\_InnoNet will drive networking, policy and innovation in the field of **substitution** of critical raw materials.

This project is financially supported by the 7th Framework Programme of the European Commission

## Further Information

Project Coordinator: Dr Claire Claessen  
Project Manager: Dr Catherine Joce
